

Umovie

This a webplatform to see movies. This has been realised with angularJS with Materializecss Framework.

Required

node && npm

Debian Based

```
$> sudo apt-get install nodejs
```

Archlinux

```
$> sudo pacman -S install nodejs npm
```

OpenSuse

```
$> sudo yum -y install nodejs
```

Run the application

Run this command at the root of the project

```
$> npm install
```

This will install all dependencies the application need to be launched correctly

Then:

```
$> node server.js
```

Finally open your browser and go on <http://localhost:4242>

Description

Routes :

Page home.html

```
HOME -> /#!/home
```

Page movie.html

```
MOVIE -> /#!/infofilm
```

Notes : I created this route but actually it's a template of modal. If you want to see this page in its right context, check /watchlist, and then double click on a cover in the carousel.

Page tvshow.html

```
TVSHOW -> /#!/tvshow
```

Page actor.html

```
ACTOR -> /#!/actor
```
